

Software Requirements Specification (SRS)

Project Name: Task Management System

1. Introduction

1.1 Abstract

1.2 Purpose

1.3 Scope

2. System Description

2.1 Main Features

3. Functional Requirements

3.1 User Management

3.2 Task Operations

3.3 Task Tracking

4. Non-Functional Requirements

4.1 Performance

4.2 Security

4.3 Usability

4.4 Reliability

5. Technology Stack

5.1 Frontend

5.2 Backend

5.3 Database

6. User Diagram

7. Future Scope

8. Conclusion

1. Introduction

1.1 Abstract

The Task Management System is a simple web application that helps users manage their daily tasks easily. Users can create, update, and delete tasks, set deadlines and priorities, and track their progress as Pending, In Progress, or Completed. It is designed to improve productivity by keeping all tasks organized in one place. The system provides a clean, secure, and user-friendly interface that makes task management quick and efficient.

1.2 Purpose

The purpose of this project is to develop a **Task Management System** that helps users manage their daily tasks easily. It allows users to create, update, and track tasks in one place.

1.3 Scope

This system is designed for individuals and small teams to improve productivity. It helps users organize tasks, set deadlines, and track progress efficiently.

2. System Description

The Task Management System is a basic application that helps users manage tasks digitally instead of using paper or manual tracking.

2.1 Main Features:

- User login and registration
 - Create and manage tasks
 - Set deadlines and priority
 - Track task status (Pending, In Progress, Completed)
 - Accessible through both mobile phones and computers using a web browser.
 - Simple dashboard view
-

3. Functional Requirements

The system should support the following functionalities:

3.1 User Management

- Users should be able to register using a username, email, and password.
- The system should validate user credentials during login.

3.2 Task Operations

- Users should be able to create, update, and delete tasks.
- Set deadlines and priority levels (Low, Medium, High)

3.3 Task Tracking

- Users should be able to mark tasks as Pending, In Progress, or Completed.
 - View task progress dashboards.
-

4. Non-Functional Requirements

4.1 Performance

- The system should respond quickly.
- It should support multiple users at the same time.

4.2 Security

- Users must log in using a username and password.
- Passwords should be stored securely.

4.3 Usability

- The system should be simple and easy to use.
- The interface should be clean and user-friendly.

4.4 Reliability

- User data should be saved safely.
 - Data should not be lost during use.
-

5. Technology Stack

5.1 Frontend

- HTML
- CSS

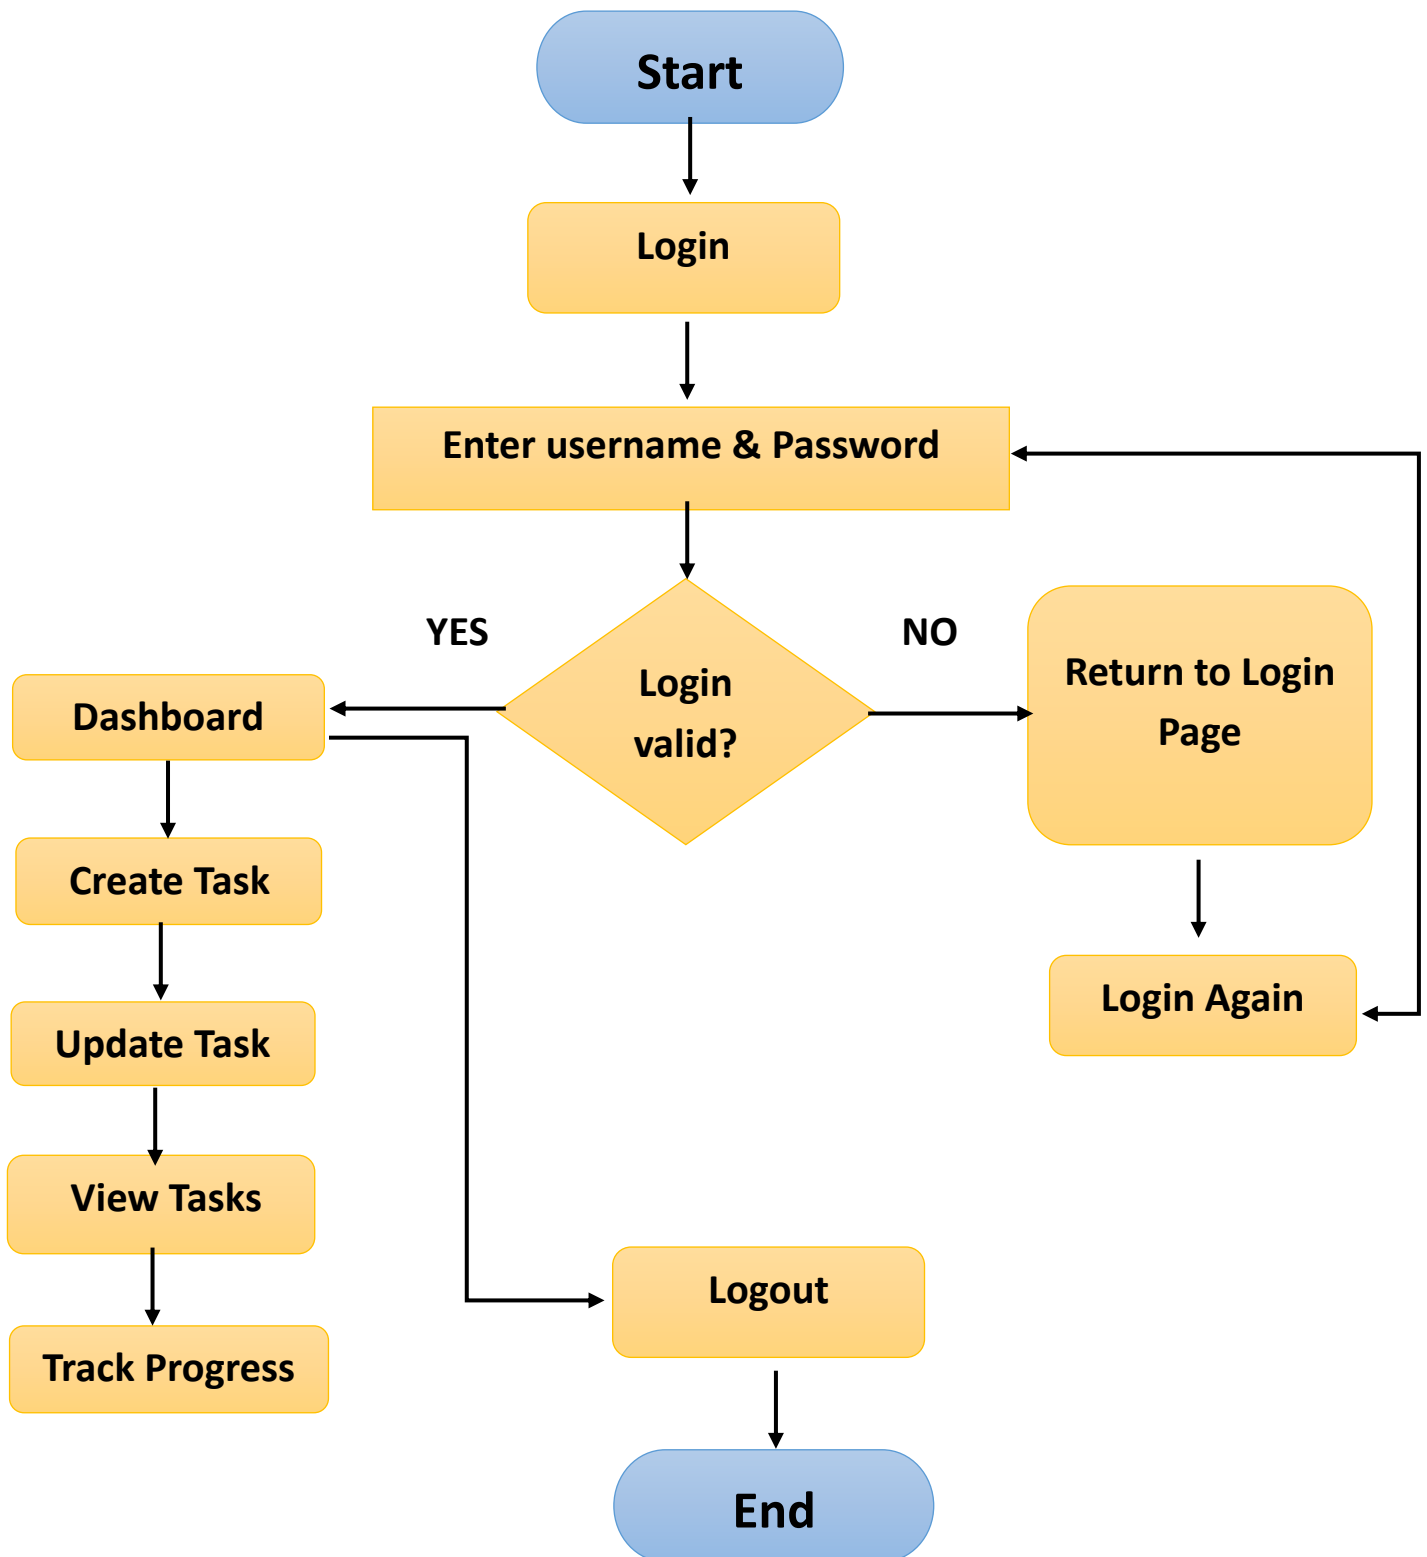

5.2 Backend

- Python
- Flask framework

5.3 Database

- SQLite
 - MySQL
-

6. User Diagram

7. Future Scope

- AI-based task prioritization.
 - Real-time collaboration and chat system.
 - Integration with calendar tools (Google Calendar, Outlook)
-

8. Conclusion

The Task Management System helps users organize and track tasks efficiently in one platform. It includes features like task creation, updates, progress tracking, and notifications. The system is simple, user-friendly, and accessible through both mobile phones and computers. Future enhancements can improve the system with AI features and collaboration tools.
